A Study on Measures for Designating Sorokdo as Cultural Heritage

SUMMARY

Park, Ilhyang
Shin, Chihoo
Son, Eunshin

The purpose of this study was to propose alternatives to the scope of designation, custodians, and name, which were controversial in the designation of Sorokdo as Cultural Heritage. The spatial scope of the study is Sorokdo Island, and the legal system related to cultural heritage, which is scheduled to be implemented in the second half of 2024, is the scope of the review. Through literature research, field trips, interviews and expert advice, we wanted to comprehensively review the characteristics of each alternative and propose a road map suitable for the situation in Sorokdo.

Through the analysis of the characteristics of each cultural heritage type and the distribution of buildings, two measures were proposed: partial designation and step-by-step expansion reflecting the characteristics of each area, and national registration measures reflecting the characteristics of the current cultural heritage system. For the custodians, the composition of an integrated management organization was proposed after analyzing the characteristics of Sorokdo Cultural Heritage Management, reviewing alternatives raised through prior researches, interviews with the interested parties, and expert advice. Regarding the name, it was proposed to give the name which was proposed at the time of application for designation.
